Set up instructions:
1. Open terminal, log into mysql, create a database 'mytest'
2. Command line:
    GRANT ALL PRIVILEGES ON *.* TO 'username'@'%' IDENTIFIED BY 'password' WITH GRANT OPTION;
    FLUSH PRIVILEGES;
3. Quit mysql
4. Close the Firewall on your computer
5. Cd into sql folder
6. Command line:
    mysql -u 'username' -p mytest < user.sql
    mysql -u 'username' -p mytest < test.sql
    mysql -u 'username' -p mytest < problem.sql
7.
Change the IP address to your current IP address
Change the user to your mysql username
Change the password to your mysql password
If you create database names other than 'mytest', change the database name to what you created

```java
public class JDBCUtils {
    private String ip = "192.168.0.36";
    private String user ="yiranpan";
    private String password ="yiran1228";
    private String database = "mytest";
```
